HAL is a multi-disciplinary open access archive for the deposit and dissemination of scientific research documents, whether they are published or not. The documents may come from teaching and research institutions in France or abroad, or from public or private research centers.

L'archive ouverte pluridisciplinaire **HAL**, est destinée au dépôt et à la diffusion de documents scientifiques de niveau recherche, publiés ou non, émanant des établissements d'enseignement et de recherche français ou étrangers, des laboratoires publics ou privés.

Practical appraisal of **extra-probabilistic** approach:

support for decision-making under
deep uncertainty for future coastal flooding

Jérémy Rohmer j.rohmer@brgm.fr

Co-authors: G. Le Cozannet, J.C. Manceau

IPCC uncertainty language

“GMSL will rise between [...] 0.84 m (0.61–1.10 m, likely range) (RCP8.5) by 2100 (medium confidence) relative to 1986-2005” (SROCC, Chap. 4, 09/2019)

Mastrandrea et al. (2010)

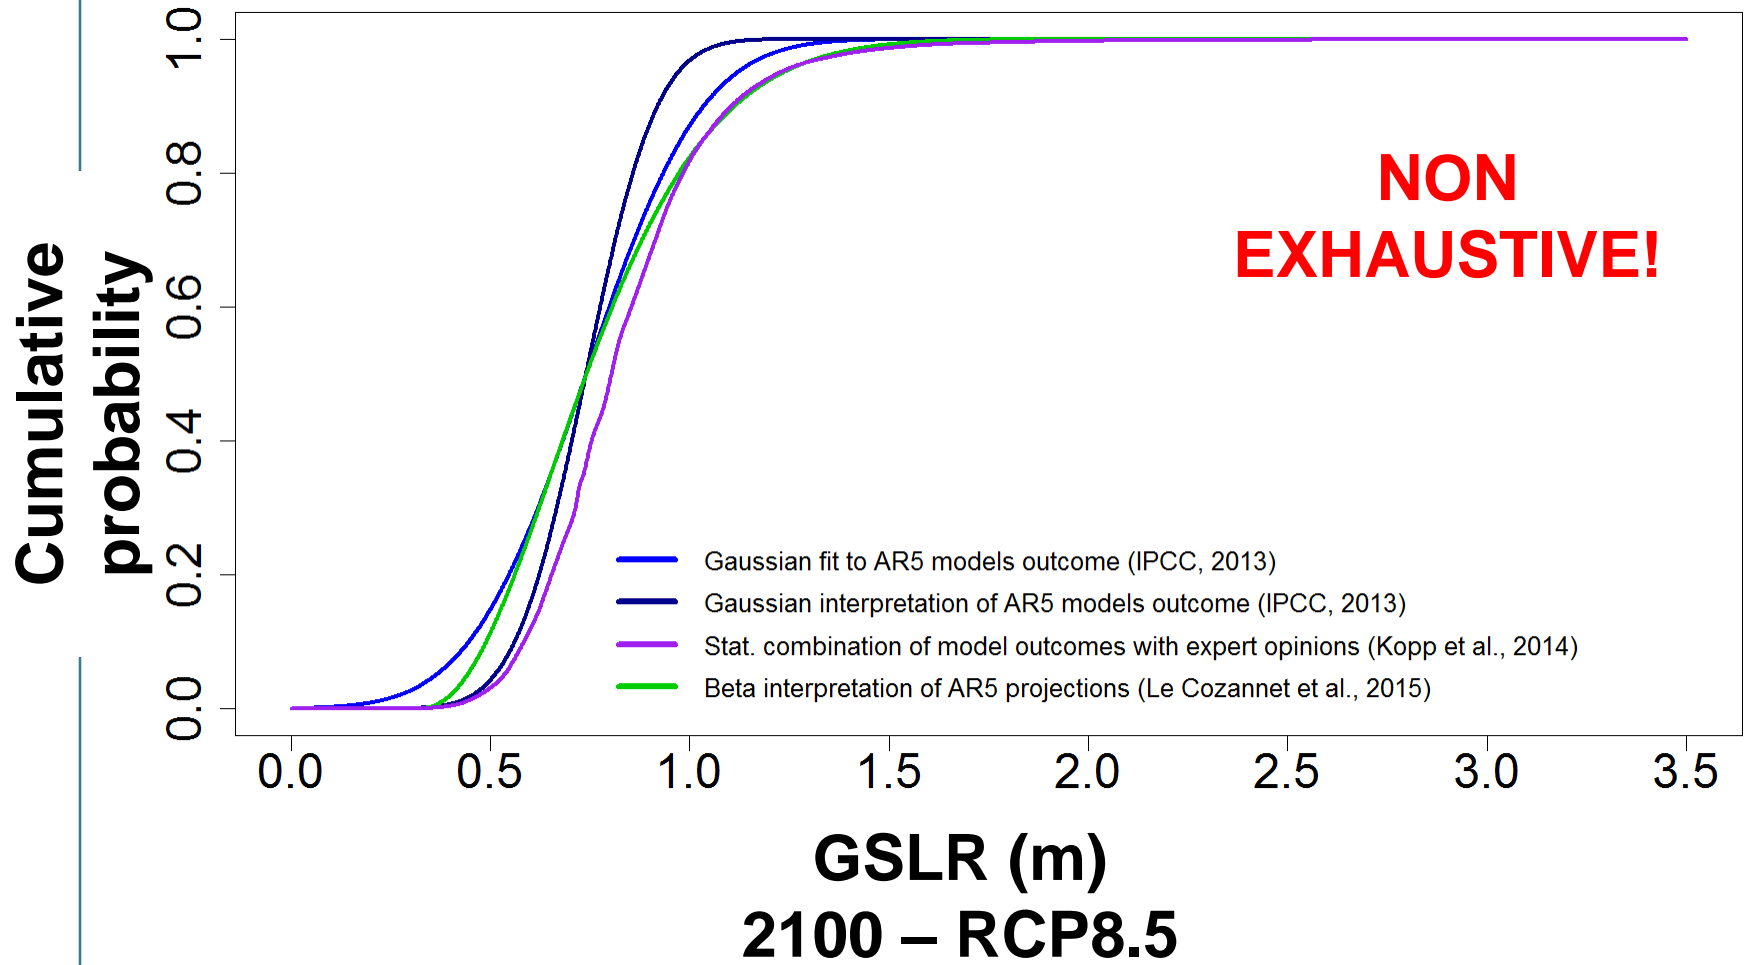

IPCC uncertainty language

“GMSL will rise between [...] **0.84 m (0.61–1.10 m, likely range)** (RCP8.5) by 2100 (medium confidence) relative to 1986-2005” (SROCC, Chap. 4, 09/2019)

Term*	Likelihood of the Outcome
<i>Virtually certain</i>	99-100% probability
<i>Very likely</i>	90-100% probability
<i>Likely</i>	66-100% probability
<i>About as likely as not</i>	33 to 66% probability
<i>Unlikely</i>	0-33% probability
<i>Very unlikely</i>	0-10% probability
<i>Exceptionally unlikely</i>	0-1% probability

Mastrandrea et al. (2010)

Several credible probabilistic projections based on **slightly different assumptions** have been published

Le Cozannet et al. (2017) based on AR5; see also Bakker et al. (2017)

Does it matter?

Le Cozannet et al. (2017) based on AR5

Does it matter?

Le Cozannet et al. (2017) based on AR5

Alternative setting: interval

More than just an interval

Probability P that GSLR is within the interval

Term*	Likelihood of the Outcome
<i>Virtually certain</i>	99-100% probability
<i>Very likely</i>	90-100% probability
<i>Likely</i>	66-100% probability
<i>About as likely as not</i>	33 to 66% probability
<i>Unlikely</i>	0-33% probability
<i>Very unlikely</i>	0-10% probability
<i>Exceptionally unlikely</i>	0-1% probability

IPCC(AR5)
likely range

GSLR (m)
2100 – RCP8.5

Possibility setting

Probability P that GSLR is within the interval

Possibility setting

Let us add more information

Let us add more information

Translation into probabilities

Le Cozannet et al. (2017)

Translation into probabilities

Cumulative probability

Box contains all the possible probability models consistent with:

- 1. IPCC likely range**
- 2. HE scenarios**

Le Cozannet et al. (2017)

What is the probability of flooding by 2100?

Rohmer et al. (2019)

Climate Change scenario

Scenarios RCP2.6,4.5,6.0,8.5

Global SLR projection

Kopp et al. (2014)'s projections

Highend scenarios

Regional SL variability

Triangle probability law

Extreme water levels

Pareto probability law

Wave setup

Uniform probability law

Cascade of uncertainty

Coastal water level h

Using probabilities

Probability of non-exceedance, threshold=3m

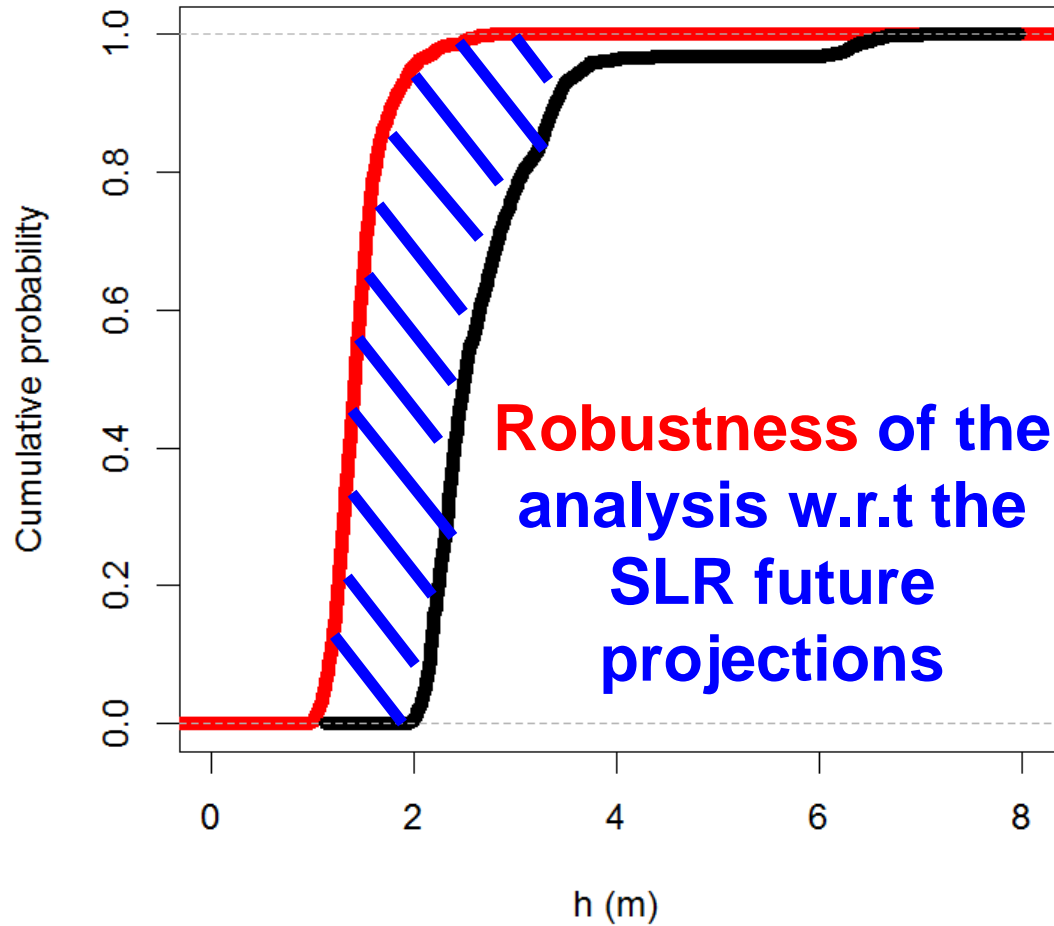

Using now imprecise probabilities (p-box)

Propagation using algorithm implemented in R (pkg HYRISK, Rohmer et al., 2018)

Using now imprecise probabilities (p-box)

Rohmer et al. (2019)

Probability of non-exceedance, threshold=3m

Rohmer et al. (2019)

Summary

Pros...

Nuance too confident probabilistic results

Picture **what is unknown**

Support decision-making w.r.t deep uncertainties

Guide new **knowledge gathering**

} **This presentation**
