

What **registers** are currently available / planned in your country?

- BRGM ones (geology, mining, risk, groundwater,...)
- French water information system,
- COVADIS, CNIG,
- Soil information system
- *Organizations (data providers)*

What **tools** do you use to manage registers?

- ukgovld (ldregistry) - BRGM
- re3gistry
- ad'hoc ones

What **features** would you like to see in a registry tool?

- A proper linked data approach
- Coherence tests to avoid re-declaring concepts across registers

How do you plan to **contribute** to the further development of the **Re3gistry**?

- Have it 'fed by'/'connected to' other tools (like ukgovld) to foster a linked data approach and not a tool approach on the registers and register federation topics
